

TLA+ Study Group — Week 03

Bartosz

December 6, 2025

Brief Description of the Topics

Record syntax

- `r == [ prof |-> "Fred", num -> 42]`
- record fields are nominal only, position doesn't matter
- `foo["bar"] == foo.bar`
- `f EXCEPT !["prof"] = "RED" == f EXCEPT !.prof = "RED"`

$$f'(x) = \begin{cases} f'(x) = f(x) & \forall x \in \text{dom}(f) \setminus \{ \textit{prof} \} \\ f'(x) = \textit{RED} & x = \textit{prof} \end{cases}$$

What stood out

- I don't think I can live without types. I spent 30 minutes debugging the spec because I wrote „committed” instead of 'committed” inside `RMRcvCommitMsg` - this is JS level of bullshit.
